

Neobotix GmbH is pleased to announce the commencement of its partnership with Meili Robots

Heilbronn, Germany – 2023-09-05 – Neobotix GmbH is set to partner with Meili Robots to integrate and test the Meili Fleet Management System (Meili FMS) in Neobotix robots.

In April, we successfully launched our new mobile robot generation, ROX, alongside our rebranding initiatives. As a clear indication of our dedication to the rebranding process, we remained focused on ongoing development, research, and analysis to pinpoint areas for improving the user experience with the ROX platforms. One product that immediately captured our attention was Meili FMS. The first glimpses of Meili FMS provided us with valuable insights that influenced our decision to enter into a partnership with Meili Robots. This collaboration will involve integrating Meili FMS and conducting testing on our robots with several relevant use cases.

Meili FMS is anticipated to seamlessly integrate with ROS 2 right out of the box, and with their user-friendly tools, the software team at Neobotix GmbH is both excited and confident that it will meet the needs of our customers. The results of these tests will be announced at a later date.

At this juncture, we would like to extend our gratitude to Meili Robots for their willingness to partner with us. We are confident that our partnership will evolve to the next level and beyond.

About Neobotix GmbH:

Neobotix is a world-famous manufacturer of mobile robots and robot systems. We offer robots and manipulators for all applications with full ROS / ROS 2 support. To know more about our robots and components, please visit <https://www.neobotix-robots.com>

About Meili Robots:

Meili Robots was founded in April 2019 by Aldus von der Burg, focusing on the mobile robots sector. This emerging market is growing substantially, surpassing initial predictions. Not only is there a positive public interest, but technology is also highly accessible. To know more about Meili Robots, please visit <https://www.meilirobots.com>
